

5 Reasons To Tint Your Home's Windows Window Tint should be Installed in Every Home

There are many benefits of home window tint, also known as solar window film, which is applied to the interior surface of your homes windows. Installing home window tint is not done for a decorative motive, like it is with decorative window film. The primary purpose of solar window film is to deflect the direct sunlight. There are a number of reasons that you might want to do this.

Protect The Health And Comfort Of Your Family

Excessive exposure to Florida's harsh direct sunlight is just plain bad for you. It can cause deterioration of the skin which leads to premature aging and premature crow's feet. It can also cause dry skin which involves itchiness and rashes, not to mention the increased chance of skin cancer. Florida's strong ultraviolet rays also affect your furniture and interior décor causing fading and deterioration of furniture, carpet and flooring and your precious decorations. Home window tint blocks 99% of the ultraviolet light produced by Florida's powerful sunshine that can cause such damage. It is a good idea to control your home's interior exposure to sun as much as possible, there-by protecting your furniture and interior decorum. Save the sunlight exposure for doing fun things outside. Protect your home from the Florida sun's vicious ultraviolet rays

Guard Your Privacy

Privacy is important, but why would you want to keep your shades pulled down all the time? Home window tint ensures that privacy during the day and it doesn't block your view of the world! Solar window film permits natural sunlight to brighten the interior of your home while blocking the harmful ultraviolet rays of Florida's harsh direct sunlight. Solar window film comes in many different types. If you want to protect the privacy inside your home, choose a tint with a higher reflective rate. That way, you can see out but you can't see in during the day. At night with interior lights on in your home residential window tint does not ensure as much privacy, so it is a good idea to close the blinds after you've enjoyed the view all day!

Conserve Energy

Make Your Home More Attractive

The primary purpose of solar window film is not a decorative function, it does make your home look better from the outside. Curb appeal is important to most homeowners. When decorating the inside of house, you are not going to use curtains that don't match in one room. So, why would the outside of your house show different colors of curtains? Curb appeal also enhances the resale value of your investment. Home window tint will block or obscure the view of the things that are inside the house from the outside (depending on its reflectivity). Solar window film comes in many colors and shades as well so you can chose the right accent to complement your home's style and your taste. Home window tint has a life span of about fifteen years, and the payback period of only 2-3 years, home window tint should definitely be considered as the first step to improving privacy, your health, and home energy conservation.

Protect The Interior Of Your Home

Florida's powerful direct sunshine bears directly into your home and is phenomenal for fading carpet, drapes and furniture. The heat from it can also damage electronics and digital items and cause wood to warp. In addition to its blocking powerful ultraviolet rays, solar window film can passively reflect and absorb up to 70% of incoming solar heat which keeps it from entering the house there-by assisting in keeping cooling costs down during the high heat of Florida's summer. Don't put up with damage from "natural elements" inside your home. Protect your prized possessions, keep them in excellent shape and make them last years longer.

Do utility bills burn your shorts? Ever notice power companies get constant rate increases while doing little to nothing to improve the power grid infrastructure? Solar window film decreases the heat that comes in from the outside which make it easier and cheaper to keep the house cool in the summer. Residential window tint also has an insulating effect that will help keep the heat in the house during the winter, which will drastically decrease your electrical bill helping to lower the amount of the check you write each month for your electricity.
